

**Q:** How do I create a playlist on my **ESP**?

**A:** You can create custom playlists on the **ESP** with Microsoft Windows Media Player 10. Playlists are collections of music that you can name, save, and play in Windows Media Player. It's a great way to listen to music, and you can build different playlists for listening to while you work, exercise, or relax at home.

To create a playlist:

1. Copy all music from your computer to **ESP**. You can have them under various folders in your **ESP**. Click **Windows Media Player** icon on your computer.
2. Click **Library**.  
You now see an expandable view of all the media items in your library.

3. If items appear in the Now Playing list, clear those items from the list to start fresh. Click **New Playing List**, and then click **Clear List**.

The list is cleared, and you are ready to build a new playlist. In this example, you will build a playlist of songs from several albums.

4. To add an album to the playlist, in the **Contents** pane, click the plus sign next to **All Music** to expand the list, and then click the plus sign next to **Album** to expand the list of albums.

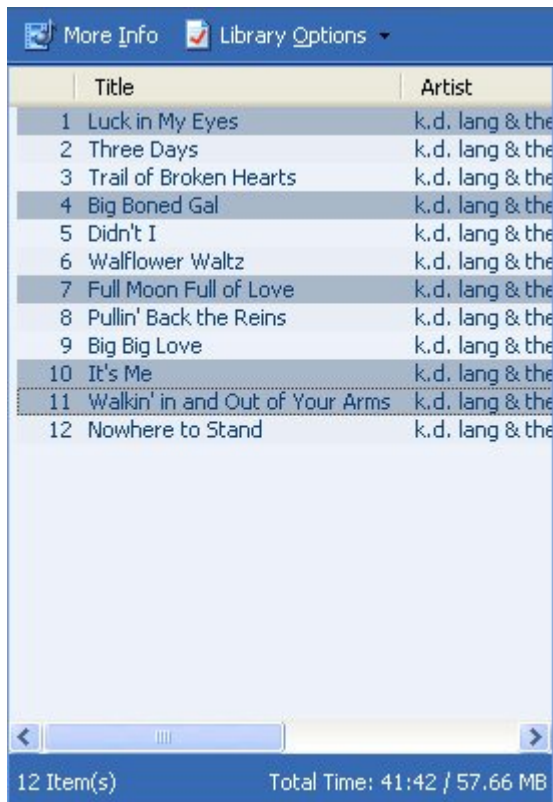

- Windows Media Player expands the category and shows all the albums in your library.
5. In the **Contents** pane, select an album title in the list, and drag the title to the **List** pane under **New Playing List**. When you drag an album from the Contents pane, all the songs in that album are added to the playlist.

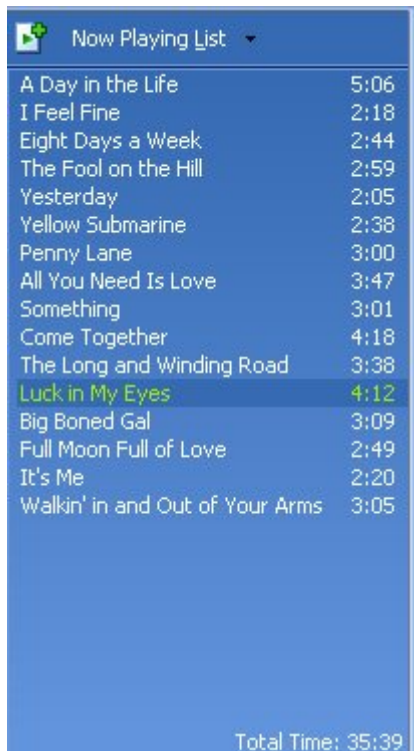

6. To add selected songs from an album, in the **Contents** pane, click the album. In the **Details** pane, all the songs on the album are displayed.

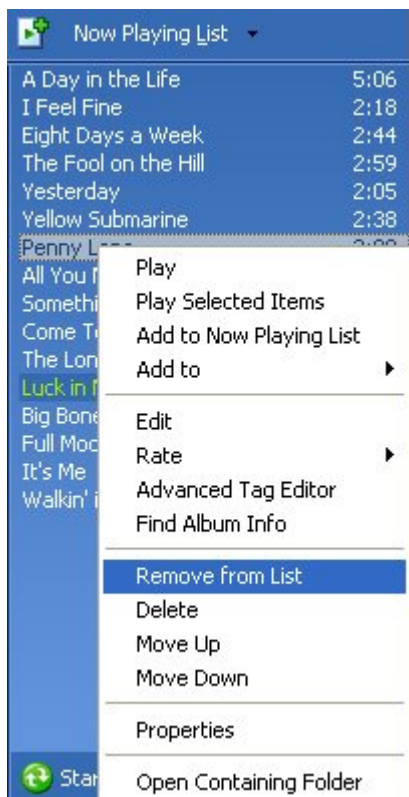

- In the **Details** pane, hold down the CTRL key, and then click the songs you want to add to the playlist.

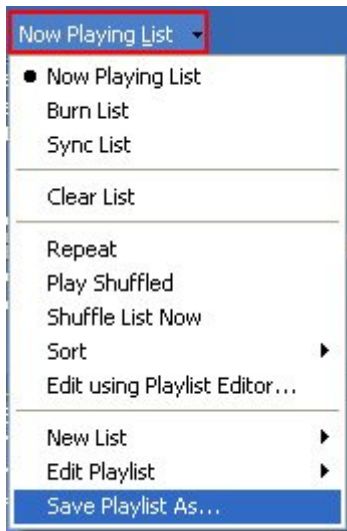

- Drag the selected songs to the **List** pane. The selected songs are added to the playlist.

- To remove an item from the playlist, right-click the item, and then click **Remove from List**.

- The item disappears from the list. It is not deleted from the library; it is just deleted from the playlist.
- To save your list, click **Now Playing List**, and then click **Save Playlist As**.

11. In the **Save As** dialog box, under **Save as Type** use **M3U Playlist (\*.m3u)** for your playlist, and then click **Save**.

Your new playlist appears under **My Playlists**.

- To listen to or watch your new playlist, expand **My Playlists**, and then double-click the playlist you just created.

Windows Media Player adds the songs from the playlist to the List pane and plays the songs, starting with the first song in the list. Now you can create playlists for anything you like.

- Drag and Drop your playlist into your **ESP** icon from **My Computer** directories.

----

Or Then click **Save Playlist As** onto your **ESP**. Remember to under **Save as Type** use **M3U Playlist (\*.m3u)** for your playlist, and click **Save**.
