

## **How To Adjust Image Cropping**

The wolverine F2D Titan produces digital image with 3:4 standard aspect ratio. However, a 35mm film has an aspect ratio is 3:4.25. In order to fit the image into a 3:4 ratio the image is cropped about 1mm for each horizontal side. A user can adjust the cropping as follows:

- 1) Press and hold the "C" button and while holding the "C" press the Power button.
- 2) At the Center ADJ screen press the right arrow button twice to highlight the Ratio (changes to yellow) and press the OK button. Press the left arrow button to decrease the value to zoom out or the right arrow button to increase the value and zoom in.
- 3) Press OK to finalize and press the Power button to turn off the unit.
